Brazil leads in ransomware attacks

The country ranks second after the United States on a list of the world's five most targeted markets

Brazil is the world's second most threatened country by ransomware attacks, according to a new study by security firm Trend Micro.

Top countries with endpoints encountering - or being crypto-locked by - strains of ransomware over the past six months

What to Expect

Available disk targets for backups

Performance

Conventional Storage

Fast Backup (write speed)
Fast Restore (read speed)
High Retention Cost

Cost/Benefit

InLine Dedupe Backup Appliance

Backup (Dedupe first, write later)
Restore (Rehydrate first, restore later)
Low retention cost

ExaGrid Tiered Backup Storage

ExaGrid Disk-cache Landing Zone
Performance Tier
For High Speed Backups and Restores

ExaGrid Long-term Retention Repository
Retention Tier
For Cost Efficiency

Pros

Fast for backups
Fast for restores

Pros

Lower disk usage
Least expensive option

ExaGrid Scalability – Scale-out & Hyper-converged

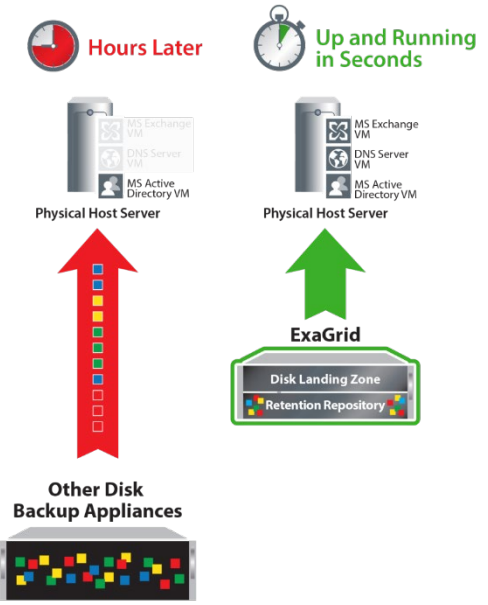

ExaGrid vs In-Line/Scale-up technology

Applications Direct

Linux/UNIX Direct TAR

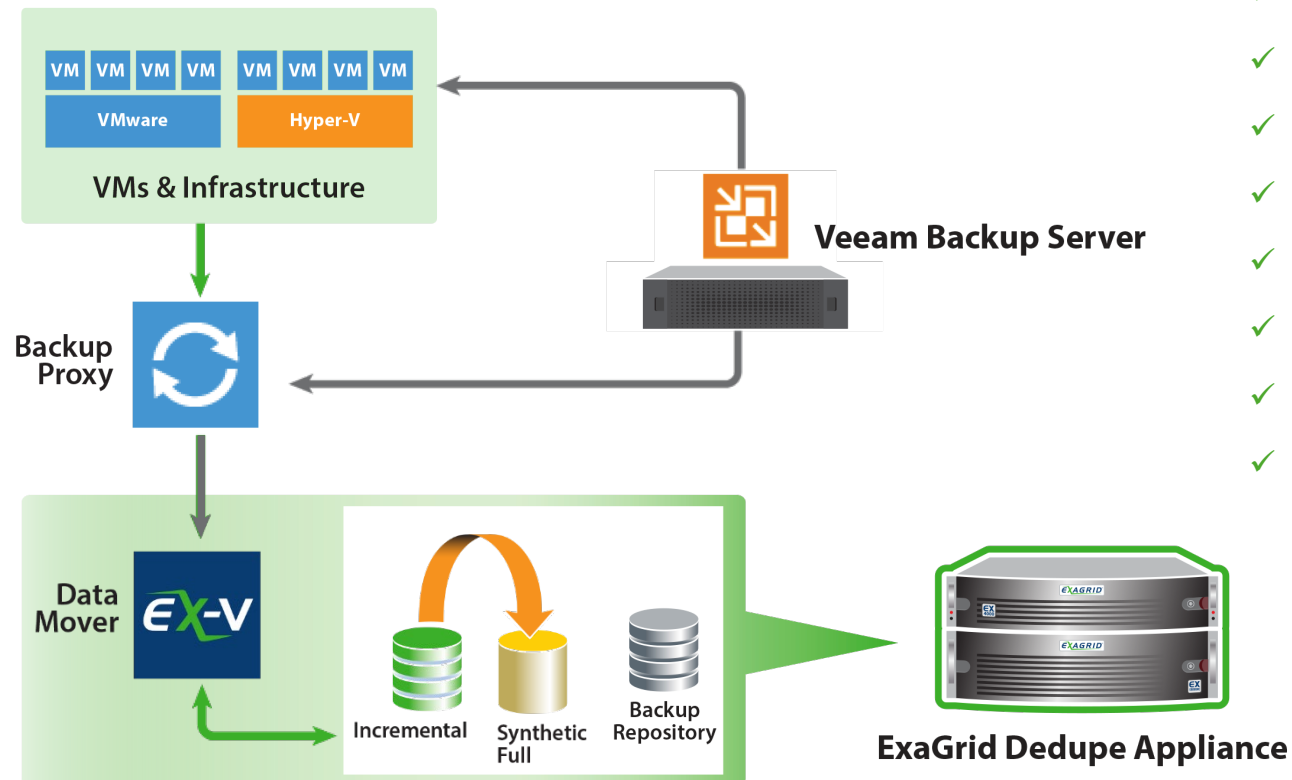

EXAGRID

VEEAM

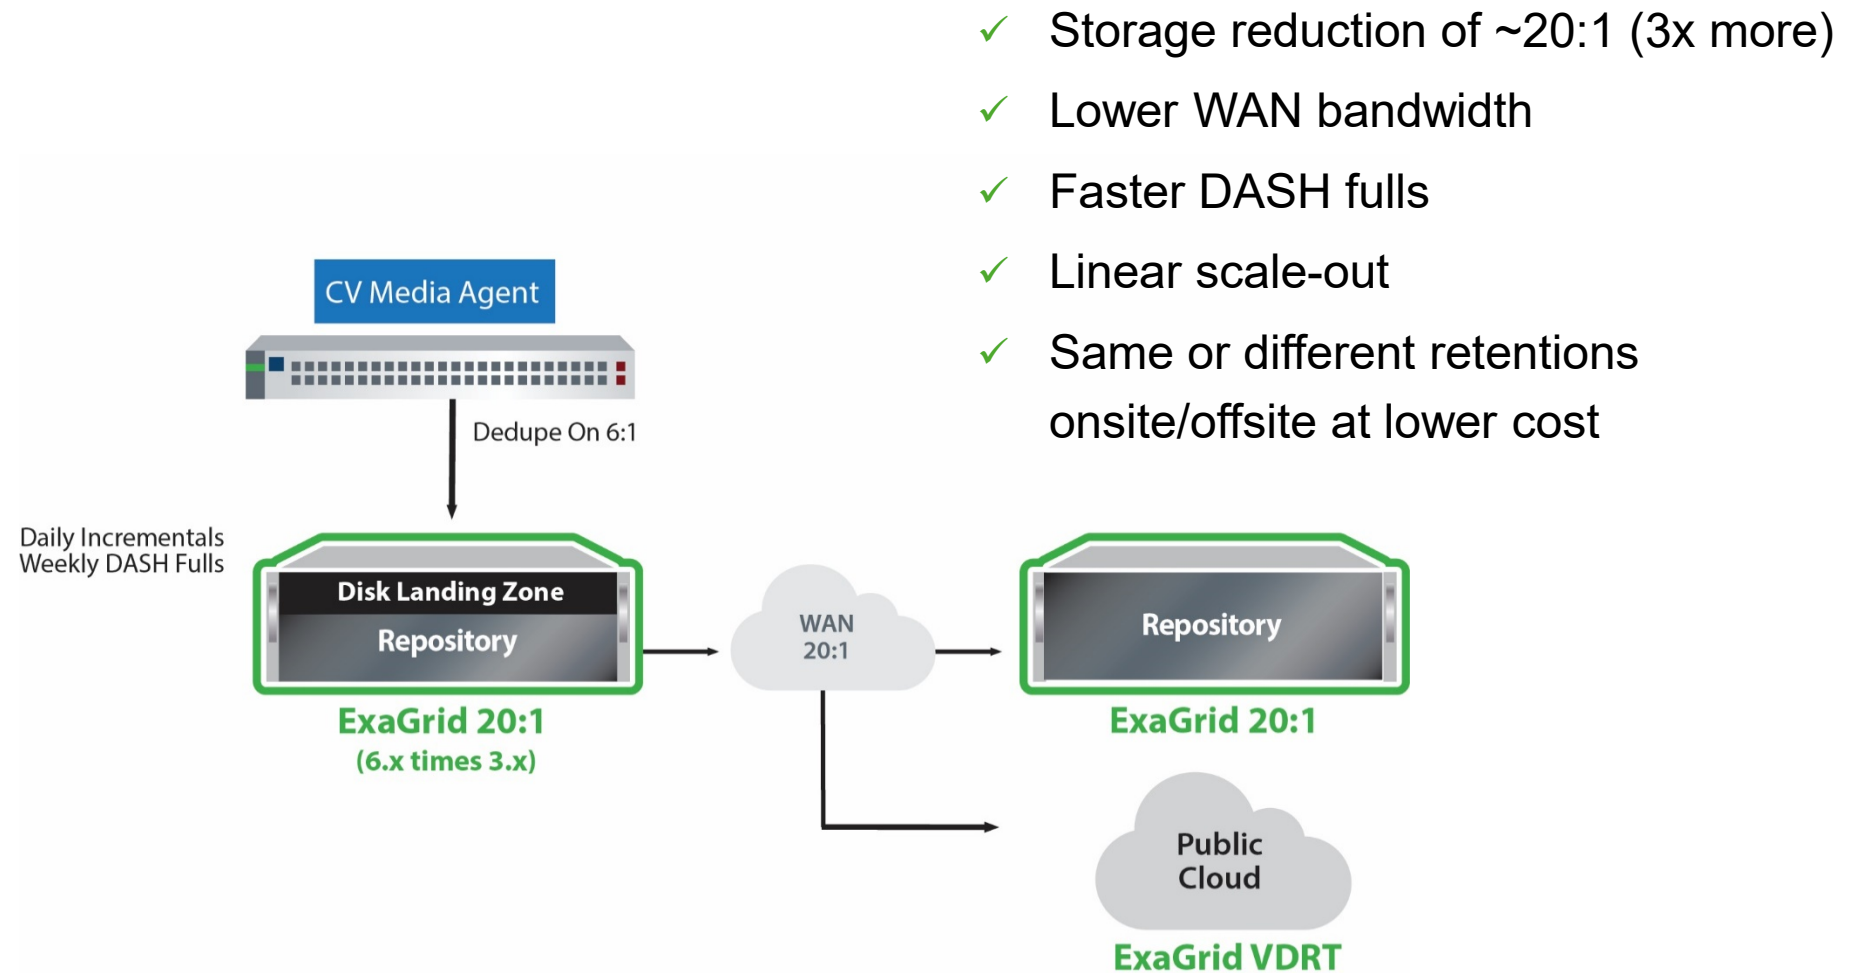

UNIQUE Integrated Data mover

- ✓ Storage reduction of ~20:1 (3x more)
- ✓ Lower WAN bandwidth
- ✓ 30% Faster Backups
- ✓ 20x Faster VM Boot
- ✓ Ransomware Proof
- ✓ 6x Faster Synthetic fulls
- ✓ Reduced Veeam Infra
- ✓ Support for Veeam SOBR

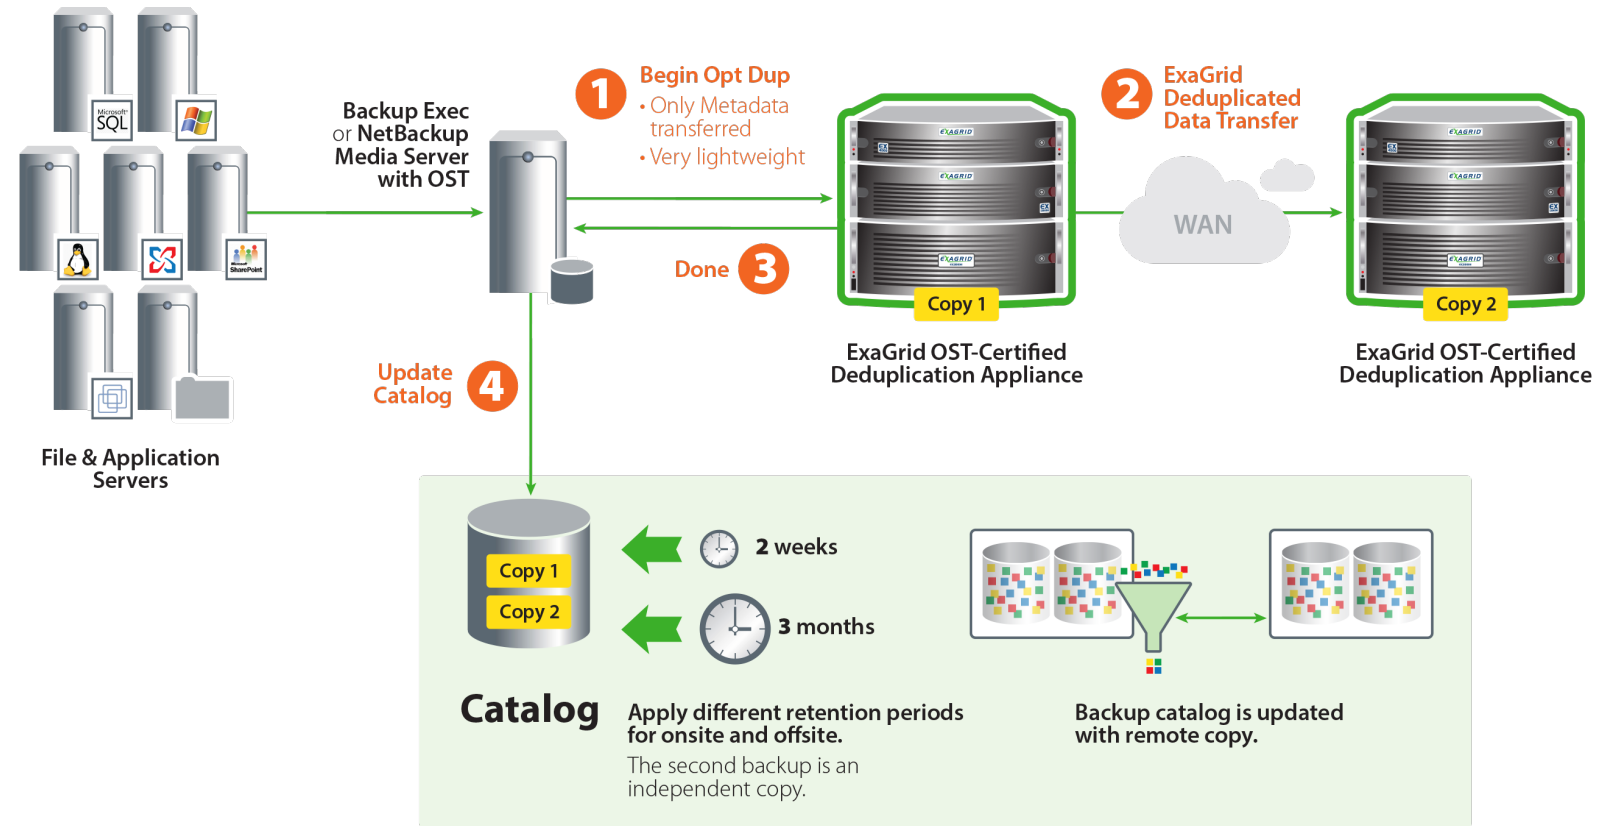

Only Dedupe ON in the Market!!

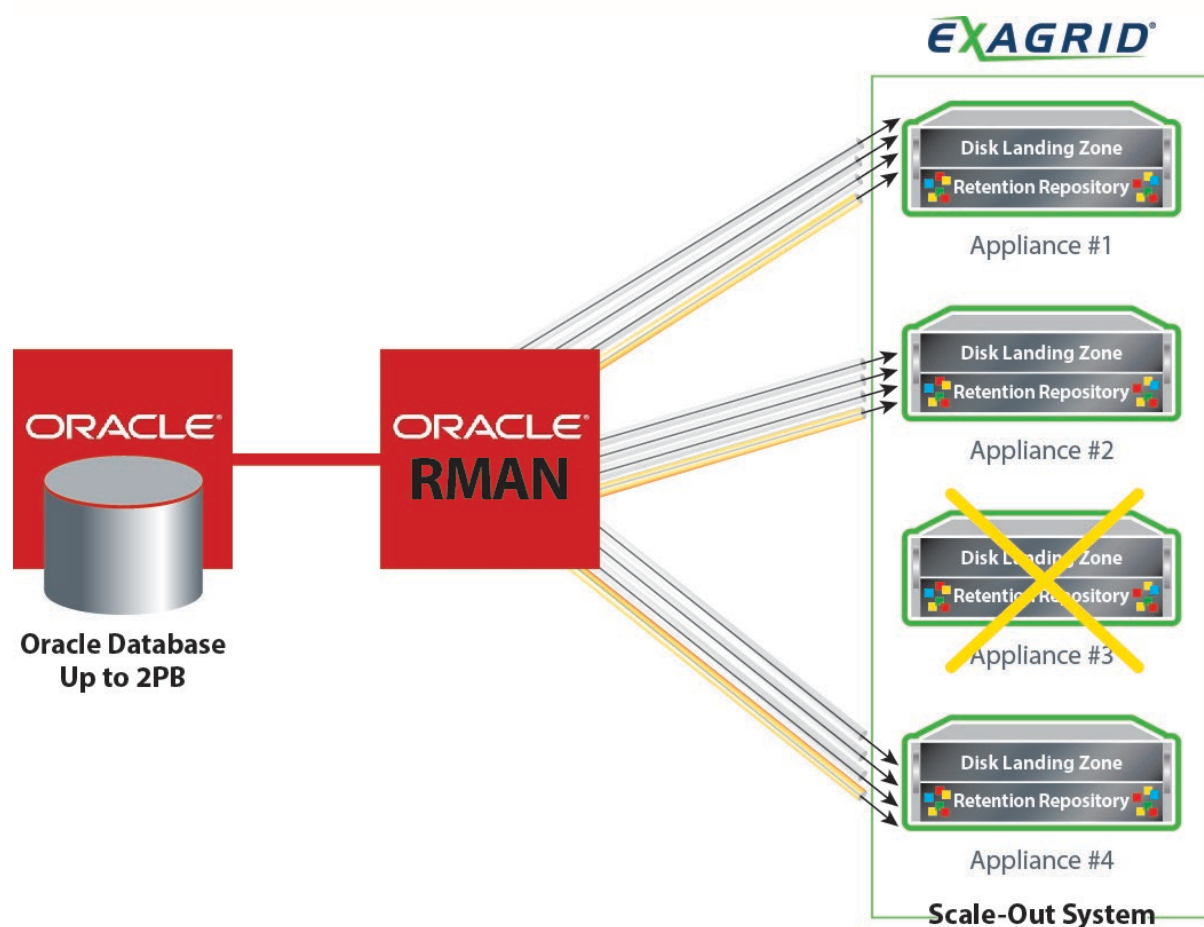

VERITAS™

Integrated with Veritas OST

Fastest RMAN Backups with Failover and RMAN Channels

- ✓ Fastest backups
- ✓ Restore in Seconds
- ✓ 2PB full database backup in a single system
- ✓ Performance load balancing
- ✓ RMAN failover if any appliance fails

DR Scenarios

- Adaptive deduplication deduplicates and replicates in parallel
- 50:1 WAN bandwidth efficiency
- Bandwidth throttle and WAN encryption for data replication
- Configure the disaster recovery site to all repository to save cost

Multi-site Data Center Disk Backup Topology

Multi-site Architecture

- 16 locations in a single group – spoke and hub
- 50:1 WAN efficiency across all sites
- Management from single UI
- Cross-site protection between sites
- Consolidated DR copies of backup reduces costs

94% of organizations get their data back

While 73% of ransomware attacks succeed in encrypting data, the good news is that 94% of organizations affected managed to get their data back.

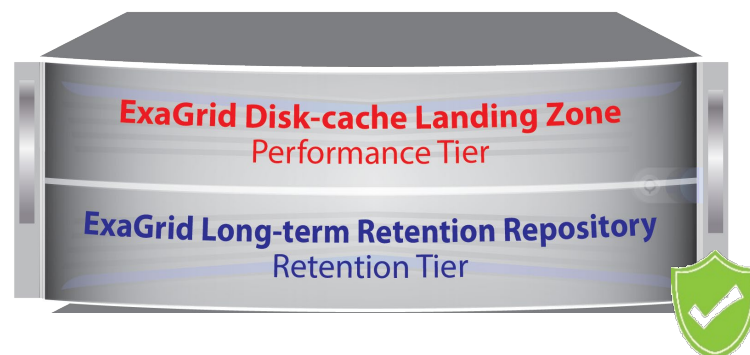

As we've seen, 26% got their data back by paying the ransom. However, more than double that (56%) restored their data using **backups**. The remaining 12% said that they got their data back through other means.

Here's the well-worn MO: Attackers infect one or more systems with crypto-locking malware, then demand a ransom, typically payable in bitcoins, for the promise of a decryption tool. Law enforcement and security experts continue to recommend that organizations maintain offsite **backups** and fast-restore capabilities, so they never need to consider paying (see: *Baltimore Ransomware Carnage Compounded by Local Storage*).

4. **Make regular **backups** and store offsite and offline.** 56% of organizations whose data was encrypted restored their data using backups last year. Using backups to restore your data considerably lowers the costs of dealing with the attack compared with paying the ransom.

Never pay a Ransom (again)
